

SALTAudio

Salt Audio is an audio production company, primarily working in podcasting. Where some companies concern themselves with generating more and more output, Salt looks elsewhere, towards building only the best things possible and choosing projects where we can continue to push the boundaries of the audio space.

Salt Audio is a place where people who want to change the way audio exists in the world can come to find a home. It is a place where the desire to push the boundaries of what was possible yesterday is everyone's objective. It's a place that clients come to when they want the best.

Salt is also growing. We're looking to meet, train, and hire people in all areas of our post production pipeline, including but not limited to, RECORDING ENGINEERING, DIALOGUE EDITING, SOUND DESIGN, AND MIX ENGINEERING. Our goal is to become the most respected, diverse and inclusive audio company working, and internally, we aim to be a place where everyone feels taken care of and respected.

Please note this is a general posting made in the desire to meet new people to train in our system and diversify our workforce. **Must be proficient in Pro Tools.**
